

What is claimed is:

1. A method of immunization identification, comprising:

filling a first syringe with a first immunization dosage;

applying a first adhesive-backed strip having a first color to the first syringe;

5 injecting the first dosage into a patient at a first injection site;

applying a second adhesive-backed strip having a first color to the first injection site after the injection; and

applying a third adhesive-backed strip having the first color to a medical office chart of the patient.

10

2. The method of claim 1 further comprising:

filling a second syringe with a second immunization dosage;

applying a fourth adhesive-backed strip having a second color to the second syringe;

injecting the second dosage into the patient at a second injection site;

15 applying a fifth adhesive-backed strip having the second color to the second injection site after the injection; and

applying a sixth adhesive-backed strip having the second color to the medical office chart of the patient.

20 3. The method of claim 1 further comprising applying a fourth adhesive-backed strip having the first color to a home chart of the patient.

4. The method of claim 1 further comprising providing the first color on a first vial containing the first immunization dosage.

25

5. The method of claim 4 further comprising providing the second color on a second vial containing the second immunization dosage.

6. A method of identifying immunizations given to a patient, comprising:
applying a first series of stickers corresponding to a first immunization to a first syringe, a
first injection site, and a medical record chart of a patient, the first series of stickers all
having a common first indicia.

5

7. The method of claim 6 further comprising applying a second series of stickers
corresponding to a second immunization to a second syringe, a second injection site, and
the medical record of the patient, the second series of stickers having a common second
indicia.

10

8. The method of claim 7 wherein the first and second indicia are first and second
colors.

9. The method of claim 7 wherein the first and second series of stickers are further
applied to a home chart of the patient.

15

10. The method of claim 7 further comprising providing the first and second indicia on
first and second vials containing the first and second immunizations, respectively.

11. An immunization identification system, comprising:
a first series of stickers all having a first color corresponding to a first immunization; and
a second series of stickers all having a second color corresponding to a second
immunization;

the first and second series of stickers being adapted to be applied to first and second
syringes, to first and second patient injection sites, and to a medical chart of the
patient.

25

12. The immunization identification system of claim 11 wherein each of the first and
second series of stickers includes at least three stickers for the respective syringe, injection
site and medical chart.

30

13. The immunization identification system of claim 12 wherein each of the first and second series of stickers includes a fourth sticker for a home chart of the patient.
14. The immunization identification system of claim 11 wherein each of the first and
5 second series of stickers includes a bar code for billing a payor.
15. The immunization identification system of claim 11 wherein each sticker includes a written identification of the immunization type.
